Bee Species found at Apostle Islands National Lakeshore

Apostle Islands National Lakeshore is one of 48 national park units surveying the distribution of bee species in vulnerable habitats such as coastal dunes, inland dunes, and alpine areas. At Apostle Islands National Lakeshore, a total of 206 bees were collected between the months of May and September in 2010 and 2011 at two different sites. Below is a list of the species found during the study and identified by the Patuxent Wildlife Research Center (USGS Maryland).
